

**Hungary, Serbia and Romania Meets for Renewable Energy
ENREG ENERGIA REGENERABILA® 2010
17. - 19.03.2010 Expo Arad International, Romania**

The interest for renewable energy and energy efficiency is common for Hungary, Serbia and Romania. The promotion of energy programs, creation of legal background, developing the renewable energy market and reaching of different targets are only some of the common objectives of these countries. In order to support the development of renewable energy and energy efficiency in these countries, the REECO group, international trade fair and conference organiser for renewable energy, considers it its duty to create a meeting point for investors, entrepreneurs and specialists at a central event ENREG ENERGIA REGENERABILA®, 17th – 19th March 2010, at Expo Arad International.

Renewable energy projects are picking up steam in Central and Eastern Europe following an agreement in December 2008 over the EU's energy and climate change "package" of legislation. To move to a low-carbon economy, the package mandates each EU country to raise its share of renewable energies, paving the way for massive investments in renewables across Europe.

Petrom's CEO Mariana Gheorghe said recently that Romania needs a serious strategy on promoting renewable energies, especially having in view that the potential is "fantastic".

ENREG ENERGIA REGENERABILA®, International Trade Fair and Conference for Renewable Energy and Energy Efficient Construction and Renovation, brings together for the second time from 17th – 19th March 2010 at Expo Arad International multipliers and actors from the south-eastern European area to a central event, in the "border triangle".

Specialized conferences with renewable energy topics: wind energy, biogas, wood energy, energy efficiency and geothermal energy, take place in parallel to the trade fair, where national and international public authorities, associations, scientists and companies present trends, research results, technologies and innovations in their field.

1st International Conference - Wind Power in West Romania, 2nd International Technology Brokerage Event for Renewable Energy and Energy Efficient Construction and Renovation in Arad, Danube-Kris-Mures-Tisza Euroregion IBEF® International Business Exchange Forum, Exhibitors Forum and Special Offers for Group Tours are only some of the opportunities given for everybody to acquire new contacts, build up network and get informed about the market situation in Romania.

Further information about ENREG ENERGIA REGENERABILA® - International Trade Fair and Conference for Renewable Energy and Energy Efficient Construction and Renovation, from 17th – 19th March 2010 at Expo Arad International, - you can find under www.enreg-expo.com.
